Ariann Michael Farias

Senior Software Engineer · Squad Lead at Afya · Campina Grande, Brazil

ariannmichael@gmail.com | ariannmichael.github.io | linkedin.com/in/ariann-michael | github.com/ariannmichael | ariannmichael.itch.io

Summary

Senior Software Engineer with 7+ years of experience building reliable web systems for healthcare and B2B platforms. Currently Squad Lead of the Core Features team at Afya, owning the shared components (SSO, opt-in, user preferences and profiling) used by every AfyaOne team. Strong in React and TypeScript on the frontend and API design on the backend; experienced in HIPAA-regulated environments. Reduced billing aggregation runtime to 0.30s for entire practice groups at DrChrono and delivered AI-driven onboarding that contributed to +20% completed profiles and +37% memberships. Indie game developer: Speed King launches on Steam on November 10, 2026.

Skills

Frontend: TypeScript, JavaScript, React, Next.js, React Native, Angular, Ember, Accessibility (WCAG)

Backend: Node.js, NestJS, Python, Django, Go, Rust, Java / Spring, GraphQL, REST APIs, MongoDB, SQL (MySQL), Snowflake, AWS Redshift

Architecture: Microservices, Clean Architecture, Software Reliability, HIPAA Compliance, Medical Billing, Real-time (WebSockets)

Testing & Quality: Jest, Cypress, Pytest

Infra & DevOps: AWS, GitHub Actions, ArgoCD, Jenkins, Sentry, Prometheus

Game Development: Godot, Unity

Experience

Squad Lead / Senior Software Engineer, Afya — Apr 2026 – Present

São Paulo, Brazil

- Lead the Core Features team behind the shared components used by every AfyaOne team
- Own single sign-on (SSO) and opt-in/consent flows
- Build user preferences and user profiling services

Stack: Next.js, NestJS, MongoDB, ArgoCD, AWS, GitHub Actions

Senior Software Engineer, DrChrono by EverHealth — May 2025 – Mar 2026

United States (remote)

- Built patient-facing scheduling and medical-record features in React and TypeScript, with accessible components that raised user engagement 22%
- Made billing and claims more reliable with optimized workflows and idempotent job handling
- Redesigned billing aggregation with AWS Redshift, moving from per-doctor to practice-group batches: 0.30s runtime and no more production timeouts
- Helped decompose a Django monolith into Rust microservices for performance-critical workloads
- Applied Clean Architecture and automated testing to keep services maintainable

Stack: React, TypeScript, Django, Python, Rust, AWS Redshift

Software Engineer, GoFasti (client: PlanetBids) — Mar 2024 – May 2025

United States (remote)

- Modernized legacy platforms by integrating React into an Ember/Django ecosystem
- Shipped AI-driven onboarding flows: +20% user profiles and +37% memberships
- Integrated transactional and event data into Snowflake for analytics, reporting and AI product insights
- Optimized Django REST APIs for performance, with an emphasis on backend reliability

Stack: React, Ember, Django, Python, Snowflake

Software Engineer, FullStack (client: GoDaddy) Apr 2022 – Mar 2024

- Built payment methods, subscriptions, receipts and renewals for GoDaddy's account team
- Added profile pages and country-specific payment verifications for wider global payment support and fewer failed transactions
- Wrote Jest and Cypress suites wired into AWS, GitHub Actions and Jenkins
- Worked in Scrum/Agile with Kanban and Jira

Stack: JavaScript, TypeScript, React, Next.js, Node.js, Go, MongoDB

Software Engineer, Afya Educacional Apr 2021 – Apr 2022

- Built the live platform and real-time chat from scratch for Brazil's largest medical school platform
- Frontend in React; backend architecture in Node.js, MongoDB, GraphQL, WebSockets and REST
- Supports thousands of medical students and professionals across Brazil

Stack: React, Node.js, GraphQL, MongoDB, WebSockets

Core Developer, OpenMined Feb 2021 – Aug 2021

Remote

- PySyft: features and bug fixes for data-centric federated learning with differential privacy
- PyGrid: UI for granular permissions at the user and tensor level

Stack: Python, PyTorch, Flask, Next.js, GraphQL

Software Engineer, Stefanini Brasil Mar 2020 – Apr 2021

- Built an employee mentoring platform: pick a topic and book a slot by mentor availability
- Built a contactless ordering web and mobile app for Almanara restaurants
- Supported customers with their questions and suggestions

Stack: React, React Native, Java, Spring, Node.js, MySQL

Software Engineer Internship, Proj4me Jan 2019 – Mar 2020

Campina Grande, Brazil

- Built project-management pages (milestones, project creation, team management, private projects) in Angular 2+ and AngularJS
- Wrote backend request handling and optimized queries in Java, Spring Boot and MySQL
- Worked in Scrum and Kanban

Stack: Angular, AngularJS, Java, Spring Boot, MySQL

Monitor (teaching assistant), Universidade Federal de Campina Grande Oct 2016 – Sep 2017

Campina Grande, Brazil

- One-on-one tutoring for students learning Java, OOP and Git

Stack: Java, Git

Games

- **Speed King** (Steam, releases Nov 10, 2026, OutOfBoundsGames): A bonkers multiplayer racing game for up to 4 local players, with pigs, kaijus, wheelchairs and power-ups.
- **itch.io** (ariannmichael.itch.io): Shoot 'Em All, Rat Catcher, Lead Me To The Light, Get Notes, Super Mega Ultra Pong

Education

BS Computer Science, Universidade Federal de Campina Grande Jan 2016 – Dec 2021

Languages

English (bilingual) · Portuguese (native) · Spanish (limited working)
