Certifications

HTML5 e CSS3 I: Suas primeiras páginas da Web - 32 horas

TypeScript parte 1: Evoluindo seu Javascript

API com Django 3: Aprofundando em testes e documentação

Java I: Primeiros passos - 12 horas

Python I: Programando com a linguagem - 16 horas

Ariann Michael Farias

Senior Software Engineer | Javascript | Typescript | React | Next.js | Node.js | Nest.js | Python | Django
Campina Grande, Paraíba, Brasil

Resumo

As a Senior Software Engineer with over seven years of experience under my belt, I find immense joy in transforming complex challenges into reliable software solutions. My journey has taken me through various roles where I've worked end-to-end on web systems for healthcare and B2B platforms—each project teaching me something new about the delicate balance of functionality and compliance. My core strength lies in navigating high-risk domains, particularly within HIPAA-regulated environments where correctness is paramount.Currently at DrChrono by EverHealth, I've had the opportunity to dive deep into claims processing pipelines. By designing robust systems that ensure reliable insurance claim submissions with retries and error handling, I've contributed significantly to improving billing reliability. This meticulous attention to detail has not only enhanced our processes but also reinforced my belief in the importance of long-term maintainability over quick fixes.Before DrChrono, I spent time at PlanetBids where I was lucky enough to modernize legacy platforms by integrating React into an Ember/Django ecosystem. This modernization effort led to a 20% increase in user profiles, showing how thoughtful design can directly impact user engagement. It’s moments like these that fuel my passion for crafting seamless onboarding experiences—because every interaction counts!During my time at GoDaddy, I focused on enhancing payment methods across international lines while ensuring transaction reliability through JavaScript and TypeScript features. Each line of code was an opportunity to improve not just functionality but also user satisfaction—a principle I carry into every project I tackle.Outside of work, I'm always exploring new technologies and frameworks that can make our lives easier as developers while delivering the best possible experience for users. Whether it's participating in coding meetups or contributing to open-source projects, I'm eager to learn and grow alongside fellow tech enthusiasts.If you’re looking for someone who thrives on solving intricate problems within software development, feel free to reach out

via email—I’d love to connect!Skills: Python | Django | JavaScript | TypeScript | React | Next.js | NestJS | Go | HIPAA Compliance | API Development | Software Reliability

Experiência

Afya
Squad Lead | Senior Software Engineer
abril de 2026 - Present (7 meses)
São Paulo, Brasil

DrChrono by EverHealth
Senior Software Engineer
maio de 2025 - março de 2026 (11 meses)
Estados Unidos

• Developed patient-facing features using React and TypeScript, supporting appointment scheduling and medical record access within a HIPAA-regulated platform.
• Built accessible and responsive UI components aligned with healthcare compliance standards, increasing user engagement by 22% in a HIPAA-regulated environment.
• Improved billing and claims reliability by optimizing backend workflows, introducing idempotent job handling, and reducing error rates.
• Resolved a critical billing performance issue affecting large practice groups where bulk payer insurance counts were incorrect, and initialization scripts caused production slowdowns.
• Helped decompose a Django monolith into Rust microservices for performance-critical workloads, reducing
latency and improving system scalability.
• Optimized data access patterns and redesigned aggregation logic using query optimization and AWS Redshift, replacing per-doctor processing with practice-group–level batch execution; reduced runtime to 0.30s for entire practice groups and eliminated production timeouts and DevOps intervention.
• Applied Clean Architecture principles and automated testing to keep services maintainable as requirements evolved.

GoFasti
Software Engineer
março de 2024 - maio de 2025 (1 ano 3 meses)
Estados Unidos

As as PlanetBids Contractor:

• Modernized legacy platforms by integrating React into an Ember/Django ecosystem, improving reliability and maintainability of API-driven workflows.

• Enhanced onboarding experience with AI-driven flows, directly contributing to a 20% increase in user profiles and 37% growth in memberships.

• Integrated transactional and event data into Snowflake, enabling scalable analytics, reporting, and AI-driven product insights.

• Optimized Django REST APIs for performance and scalability, ensuring smoother data exchange between frontend and backend systems.

• Delivered cross-stack improvements but emphasized backend/API reliability to support sustained growth.

FullStack

Software Engineer

abril de 2022 - março de 2024 (2 anos)

As a GoDaddy contractor:

• Accomplished seamless payment method, subscription, receipt, and renewal management for GoDaddy's account team, as measured by improved transaction reliability and international payment support, by developing and maintaining features using JavaScript, React with TypeScript, Go, MongoDB, NextJS, and Node.js.

• Accomplished enhanced user experience with new profile pages and country-specific payment verifications, as measured by expanded global payment compatibility and reduced transaction failures, by implementing new UI pages and integrating payment validation logic.

• Accomplished improved code reliability and test coverage, as measured by increased stability and fewer production issues, by developing Jest and Cypress tests and integrating them with AWS, GitHub Actions, Git, HTTP Restful, and Jenkins.

• Accomplished efficient workflow management and team collaboration, as measured by streamlined development cycles and better issue tracking, by following Scrum and Agile practices, using Kanban and Jira for daily management.

Afya Educacional

Software Engineer

abril de 2021 - abril de 2022 (1 ano 1 mês)

• The company needed to maintain and expand its web applications, including Brazil's largest medical school platform, which prepares physicians from entry-

level courses to Ph.D. programs. Additionally, they required a live platform and real-time chat system to enhance user engagement and communication.
• I built the live platform and real-time chat system from the ground up, implementing JavaScript, React, HTML, and CSS on the frontend. On the backend, I designed the GraphRequest layers and architecture using Node.js, NoSQL, MongoDB, GraphQL, WebSockets, and RESTful APIs to ensure scalability and real-time performance. I also contributed to maintaining and enhancing existing features while following Kanban methodologies and Jira for daily management.
• The implementation provided a fully functional real-time chat system and live platform, improving user
interaction and engagement. The scalable backend architecture enabled seamless data flow and efficient
handling of high-user traffic, supporting thousands of medical students and professionals across Brazil.

OpenMined
Core Developer
fevereiro de 2021 - agosto de 2021 (7 meses)

I worked on open-source projects with the teams:
• PySyft - Developing and fixing bugs for data-centric federated learning with differential privacy.
• PyGrid - Creating a user interface, allowing for a more granular permission system at both the user and tensor levels.

Stefanini Brasil
Software Engineer
março de 2020 - abril de 2021 (1 ano 2 meses)

I worked on building and maintaining the following:
• A website for Stefanini's employees to mentor one another, choosing the topic and schedule based on the mentor availability - using ReactJS, React Native, HTML5, CSS3, Java, Spring, MySQL and
RESTfull HTTP Applications
• A menu on a website and app to select and order from Almanara’s restaurants,
without social contact - using ReactJS, React Native, HTML5, CSS3, NodeJS, MySQL and RESTfull
HTTP Applications
• Assisted the customers whenever needed with their questions and suggestions

Proj4me
Software Engineer Internship
janeiro de 2019 - março de 2020 (1 ano 3 meses)

• Implemented Agile principles such as Scrum, Kanban, and Sprints to manage tasks, projects, and teams efficiently.
• Developed new project management pages, including milestones, new project creation, team management, and private projects, using Angular 2+, AngularJS, HTML, and CSS.
• Built backend request-handling layers and optimized queries for company groups, project milestones, and task management using Java, Spring Boot, MySQL, and RESTful APIs.
• Applied Agile development processes to streamline collaboration and ensure timely feature delivery.

Universidade Federal de Campina Grande
Monitor
outubro de 2016 - setembro de 2017 (1 ano)

• Individual assistance to students learning Java, Object-Oriented Programming, and Git

---

Formação acadêmica

Universidade Federal de Campina Grande
Bachelor's degree, Computer Science · (janeiro de 2016 - 2021)
